

SERVICE BRIEF

Mobile Device Management

Your business, on the move.

Start Widening The Perimeters Of Business Computing With Edit Technology Solutions' Mobile Device Management System

Make use of your mobile devices without worrying too much about security.

Your employees all carry around, and depend on, many types of devices. Smartphones, tablets, ultrabooks, you name it, they have it. In order to

capitalize on this shift in mobile computing, your company needs to put in place a bring your own device policy that protects both your company and your staff. At Edit Technology Solutions, we have the answer for this necessary integration: our mobile device management solution.

In the past, some larger companies have provided their staff with company-owned and managed mobile devices in an attempt to boost productivity. While this plan is more viable than ever for small business, it doesn't make a whole lot of sense when you consider that each of these employees already have devices that they have on them all the time anyway. Our solutions allows you to place a layer of security between your company's network and your staff's device and configure permissions accordingly.

Mobile Device Management By The Pros

Ignore this booming trend in mobile computing, and you may pay in more ways than one.

Enterprise tablet adoption is estimated to grow by approximately 50% per year for the next five years. Clearly larger companies see the benefits of using this mobile technology, but how can small and mid-sized businesses compete with organizations that can offer these up as a part of their IT budget? By allowing your staff to access your network with their device, your company is able to successfully do what these larger companies are doing, at a fraction of the cost.

You'll do about anything to keep your network safe from outside intruders, but what about the threats that are present from inside your network? When you have a properly managed mobile device management platform you have a way to keep the potential threats to your company's data and infrastructure from becoming a problem. This system is effective by compartmentalizing the information on an employee's device so that the security measures that are put in place between those files and the users other files can sort out potential threats.

Support For Any Mobile Computing Platform

Edit Technology Solutions, Inc. has a solution for any type of mobile device.

There are many different operating systems that run mobile devices today. To make sure that you are able to facilitate the needs of your BYOD policy, Edit Technology Solutions provides mobile device management solutions that take this and the variance of service providers into account.
