

SERVICE BRIEF

Understanding the Modern Office

We can design, implement, and support some of today's most dynamic technologies to help build the office of your dreams.

The Design of the Modern Office

The makeup of today's office is driven by innovation.

There are countless ways the modern office transcends the office of yesteryear, but the most obvious is probably the layout. Where not long ago cubicles were all the rage, now the open office setup is most popular, as business owners and executives look to cost effective strategies to stretch their budgets and stay flexible. The open office doesn't offer much in the way of extra productivity, but because it is more affordable, many businesses will pack employees into 40-60 square feet and typically the more workers you have, the more productive your business will be.

When you look past the design and really look at the technology, the robust CRT monitors and large, noisy computer towers are gone. In their place are smaller flat screen monitors and small thin client boxes that run virtualized software off of a partitioned server. This shift in computing technology gets more in depth if you factor in cloud hosted solutions, where another business offers you some sort of computing solution. Whether it be software deployment, backup and recovery, network monitoring, or completely hosted computing infrastructure, computing services the cloud offers the

scalability and value most organizations require.

Technology Implementation

Edit Technology Solutions technology professionals can help you transform your business.

Many of the solutions you'll find in the modern office aren't the kind of off-the-shelf solutions that are effective out of the box. These solutions need to be configured and managed properly, and if they aren't, you could just be adding another expensive technology problem. As a result, it becomes crucial for the health of your business to integrate your technology solutions properly.

At Edit Technology Solutions, our technicians are proficient in the clean and efficient installation of the latest IT solutions. By providing the technical expertise and a thorough understanding of the way the solutions are utilized, we can implement state-of-the-art technology solutions with limited downtime.

Technology Training and Support

With comprehensive support and training, you can get up to speed fast.

One of the key aspects of the modern office is the availability to support when you need it. Cooperation and collaboration don't just happen. That's why Edit Technology Solutions provides end-to-end support and training for every solution we install. Our technology experts are proficient in the management of today's most complex information systems, and can bring their knowledge and experience to your team.

New Technologies

- Voice over Internet Protocol
- Conferencing Solutions
- Virtualization and Document Management
- Business Continuity Technology
- Wireless Systems
- End-to-End Security

Benefits

- Open office layouts allow more employees to fill in the same space, boosting productivity by volume.
- New technologies offer greater utility and scalability for less noise and real estate.
- Properly installed and configured solutions allow you to avoid issues.
- Complete training and support of all solutions installed.
